

# Security Fencing

---

**Security Fencing** provides an effective way to securely enclose interior bike rooms, sections of a parkade, mechanical components, control systems, void spaces and more.

Built on-site and to-fit, the all-steel construction uses a tough 9ga expanded metal screen that resists cut and pry attacks, while still allowing for air flow and clear vision. The doors are supplied with an unbreakable 6' continuous hinge and steel lock box, and can be fitted with operators and access controls (not included) by the security contractor.

Now installed in hundreds of towers, condos, offices and even stadiums across BC, Security Fencing is a proven choice for parkade partitions and bike room security.
