

Security Bike Lockers

No one wants bikes in the elevators and hallways of your building. But the people in your building with expensive bikes don't want to store them in the communal bike room.

Advantage Security Bike Lockers resolve this issue with a vault-style locker that keeps high-end bikes concealed and safe. Designed to foil all common break-in methods, features like a 2" tubular frame, thick metal hasps, a full-length striker, a 6' continuous hinge and layered corrugated sheeting help to keep thieves out.

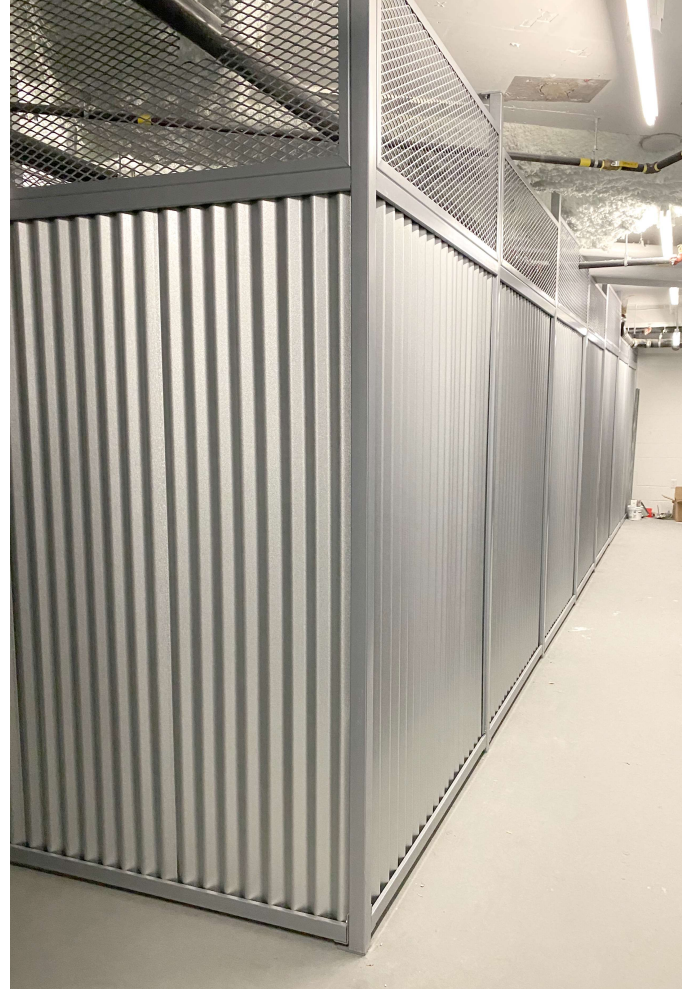

Conceived for high-end, security-challenged and downtown buildings, **Security Bike Lockers** can also turn bike rooms into profitable rooms when sold or rented to the end-user.

Advantage Security Bike Lockers: The Best Bike Locker, in the Bike Locker Business.

Walls

Security Locker walls are constructed from corrugated sheeting enclosed above and below by 2"sq steel channel. Coated in a durable Galvalume finish, the walls resist dirt, scratching and rust.

Corrugated sheets are overlapped and set into the 2" deep tube to create a light, strong partition.

Anchored to the front post and back wall, the walls float 1" above the surface to avoid the slopes and waves typical of storage room floors.

Lockers doors have maximum width of 4'. Lockers wider than 4' require a secondary front panel made from corrugated sheeting welded into a 12 gauge steel frame.
